ZF Product Information

FOR BETTER FRICTION – ZF TRANSMISSION FLUID

Transmission fluids are not all alike and, more importantly, are not interchangeable with each other. Each transmission needs a specific type of transmission fluid to operate properly. The use of incorrect transmission fluid may cause extensive damage to internal parts of the transmission and may bring the transmission right back to your shop.

The use of correct transmission fluid will increase the life of the transmission and can also reduce some friction between you and your customer.

That's why ZF Industries, Inc. offers the recommended lubricants for ZF passenger car transmissions in addition to the complete line of kits and spare parts. ZF has the recommended transmission oils available in 20-liter (18.93 quarts) canisters as well as 55-Gallon drums. Also available is the transfer case and differential oil for all-wheel applications and the recommended Torsen differential additive. All the below listed ZF lubricants are available through ZF authorized distributors.
